## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Blum et al (USP 5918223) in view of Yamada et al (USP 6630621).

Blum et al discloses a method for content-based analysis, storage, retrieval and segmentation of audio information which comprises recording a sample of audio data (not shown), deriving a rhythm feature vector which reads on a sample time signal (the rhythm feature vector comprises a tempo signal – see Fig. 14, and Col. 16 lines 8-10), sorting and matching the sample time signal (Col. 17,18). Regarding Claims 3 and 4, see Col. 6 lines 24-35.

Applicant argues that Blum et al does not disclose the recording a sample of audio data of music to be identified. Blum teaches using sound files, files of sampled digital audio data, which inherently are created by recording audio, converting it with a D-A converter, and storing it in a medium. Yamada et al discloses an apparatus and method for storing music which comprises recording a sample of audio data and deriving a sample time signal (bpm) with an A/D recorder (Figs. 1 and 3). It would have been obvious to one of ordinary skill in the art to adapt the teachings of Blum with those

of Yamada, as both are directed towards digital audio devices which analyze the tempo data therein and to provide Blum with a manner of acquiring digital audio data.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Weare et al (USP 6657117) is further cited to show related teachings in the art.
